

features and benefits

Complete solution for capturing dimensions, weight, barcodes, photos, product data and more.

Easy to use, portable and flexible data capture and management solution at an attractive price point.

The solution can be provided 'as a service' to avoid up-front capital investment and smooth business case development.

LTL Freight Transport

cubeiQ is the game-changing solution for capturing and sharing LTL shipment data.

Accurate dimensional data is critical to shippers and for carriers to protect their freight revenue.

Designed by LTL industry professionals, it's time to do freight transport better.

Robust support for
any freight charge
differences

Rapid ROI

Web portal for
visibility of freight
scanning activity
and data

Legal for trade data capture and storage.

Simplify the measurement of **oversized**, non-conveyable or **ugly freight**.

Easy integration with your existing systems, data sent near real time.

Efficient workflow for productivity, reduce forklift traffic congestion on your dock.

Capture **photographs and voice notes** to support your freight data.

Rapid ROI from freight revenue protection.

Support to ease **freight charge dispute** resolution.

Mitigate, reduce and eliminate **damages and shortages**.

Warehousing and Retail

Accurate master data is integral to the WMS running your warehouse.

Modern warehousing relies on master data for slotting, pick bin and storage capacity calculation and transport planning.

Deliver consistent, quality data across the organisation, from supplier to point of sale.

Measure any size
SKU in your
product range

Avoid data entry
errors

Web portal for
master data
management

Easy integration with your ERP or WMS, data sent near real time.

Automated **weight capture** from integrated scale.

Capture **complete inventory information**, including multiple barcodes and count of inner units per vendor carton.

Photographs and notes to compliment your master data and record any packaging or product issues.

Data validation processes to support accurate inventory data.

Web portal providing easy access to your master data.

Dashboards for visibility of your master data capture and inbound dock activity.

solution overview

Data Capture

Barcode scanner
length x width x height
Legal for trade

Alibi memory
Photographs
Notes with voice
Automated functions for
efficient workflow
Configurable to match
operational requirements

Automated weight
transmission
Triggered by Cubetape
barcode scan
Legal for trade

Data Consolidation

Web portal and cloud server
Legal for trade alibi memory

Intelligent and secure data management and storage
Hardware device utilisation and maintenance reporting
Device, user access and account administration
Data storage within customers region

Data transmitted
near real time
HTTPS

Web portal

Administration
Data management

Dashboards
Whole of network view
Labour management

Integration

Easy integration with end user systems
WMS, TMS, ERP, freight scan system
Options to remove IT dependency for trial / proof of concept
Secure data transmission
Data validation options

Data transmitted
near real time
HTTPS

End user
systems

Multiple options for data access and integration:
Standard API's
Custom API options
Data export via cubeIQ UI
Automated data exports to email

cubeIQ has 4 options to get your data from the cubeIQ infrastructure to your IT network.

Ref	Type	Scenario	Description
1	Data export	Trial or Proof of Concept No IT dependency	Data manually exported via the cubeIQ web portal. Data is exported in Excel format.
2	Automated email	Trial or Proof of Concept No IT dependency	Data automatically exported and emailed to activated email addresses. Data is exported in Excel format.
3	Standard API's	Typical end state approach Requires IT involvement	Data supplied in Json format, which can be mapped to the required format for end user system. Separate API's for data and photographs. Transmitted data is flagged to prevent duplicates.
4	Custom integration	Customer specific requirement	Custom integration options for customers with unique requirements.

Overview of cubeIQ API's:
